
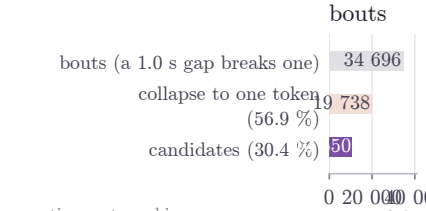
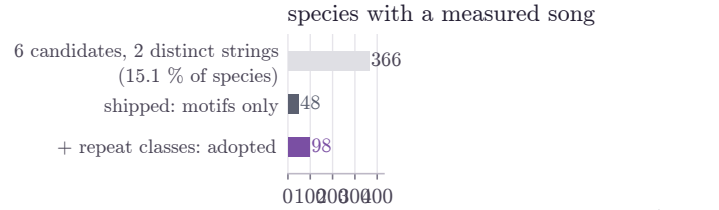
The loss here is accounting, not machinery.



6 940 of the collapsing bouts are three syllables or more, a bird repeating one sound, which is a repertoire fact and not a measurement error.



Repeat classes take song types from 96 to 356 (96 motifs, 260 repeats) and placed bouts from 1 052 to 3 741, with the within-species shuffle control unchanged to the bout at 0.170 % against a 0.2 % bar: shuffling destroys runs, so the control finds no repeat classes at all. Ninety-eight of 2 421 species is 4.0 %.
