
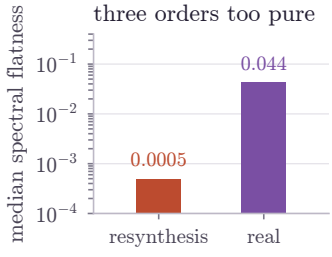
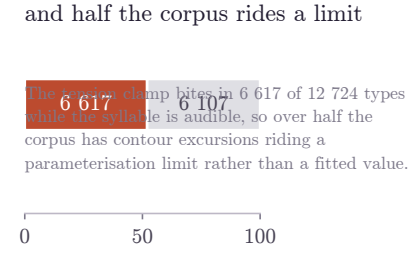
Median spectral content is right: 1.099 against 1.092. The tail is not there at all. The model contains the pulse-like regime that produces it; the fit does not reach it.



A whistle too clean to be an animal. Real labial motion at low tension is pulse-like and harmonically dense.



The aperture clamp bites in 6 617 of 12 724 types while the syllable is audible, so over half the corpus has contour excursions riding a parameterisation limit rather than a fitted value.
